

Steps to Create MSIX Package

1. Install MSIX Packaging Tool

Open Microsoft Store

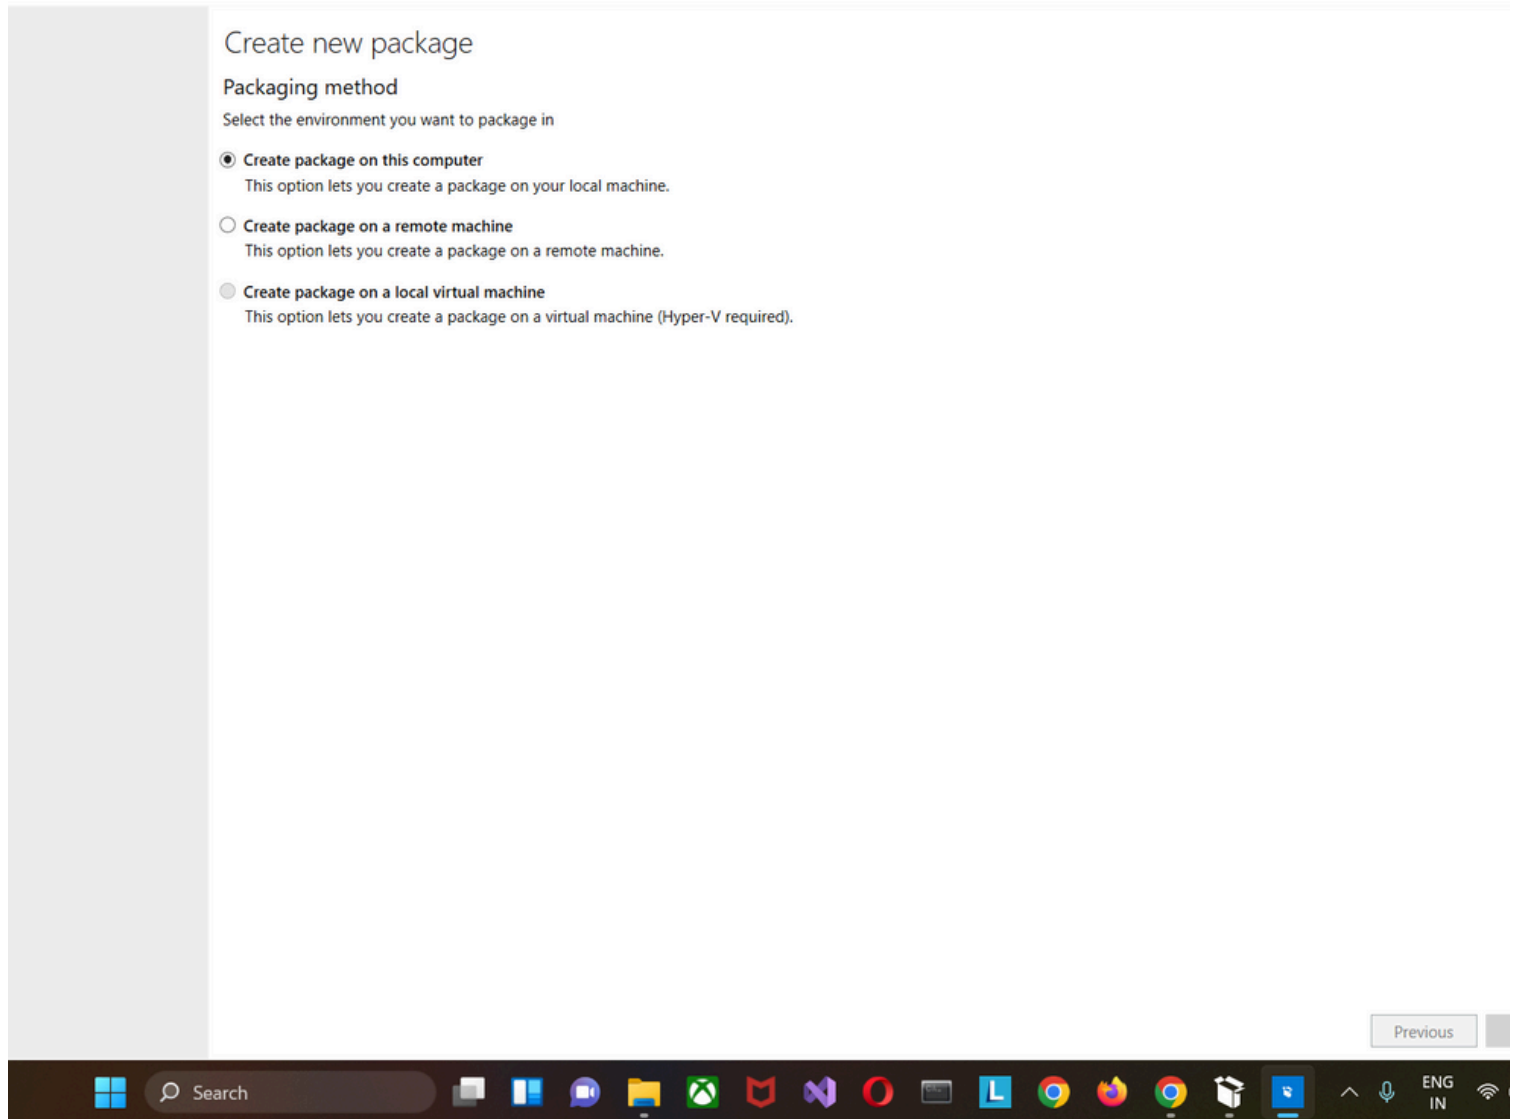

Search for “MSIX Packaging Tool”

Install it

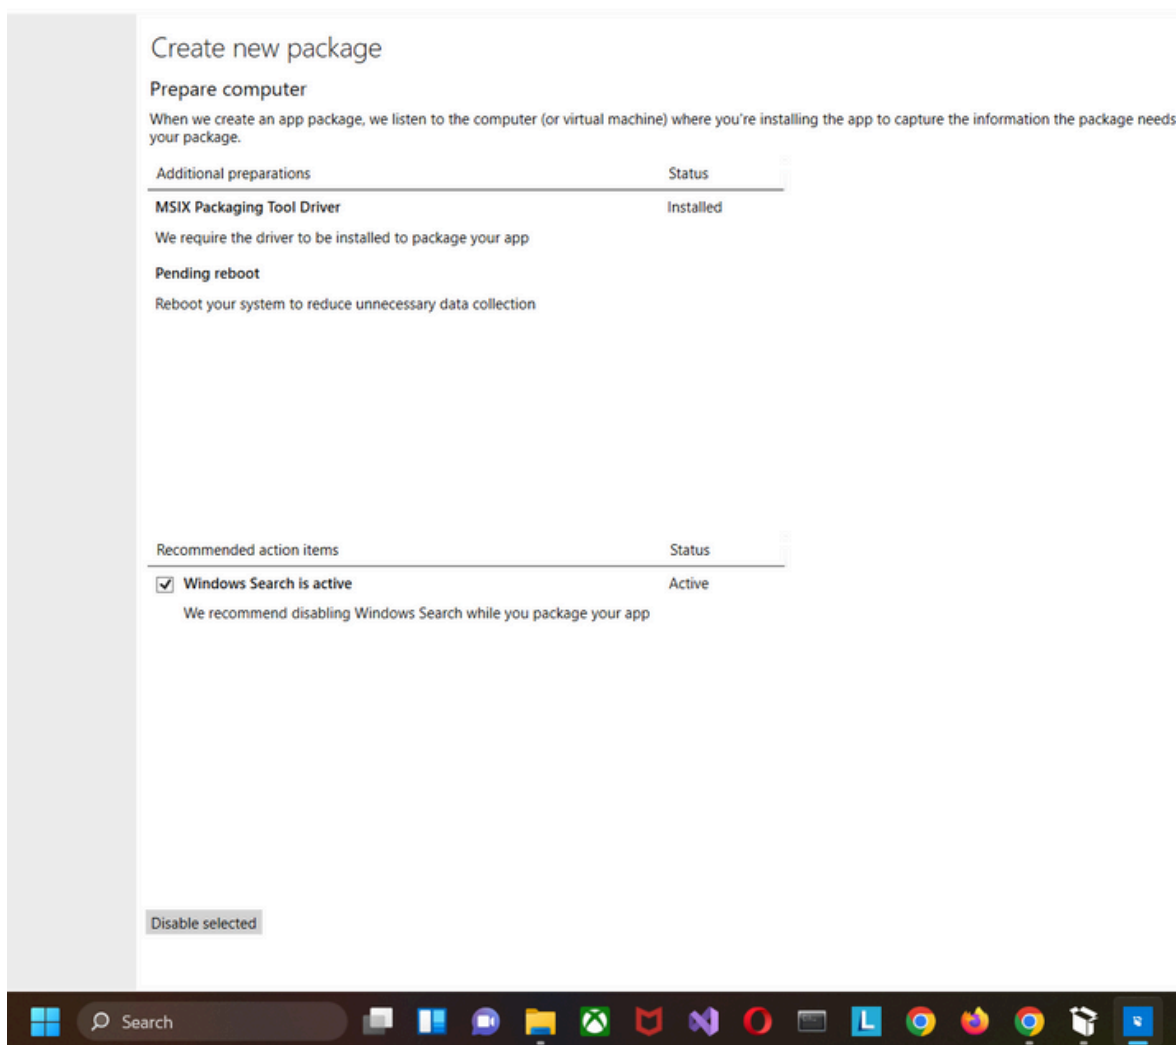

Step 2:

Click on Create New Package on the Computer and Next.

Step 3:

Click on the CheckBox and Next

Step 4:

Choose The Installer you want to Package.

Create new package

Choose the installer you want to package

If you don't have an installer, click Next to create one. You'll choose and run the files you need to install your app, and the MSIX package will be created.

Browse...

Specify installer arguments (optional)

 **Warning**

A command-line template file will not be generated unless either installer arguments to run silently are provided, or the checkbox below is checked.

"C:\Users\Aditya\Downloads\Firefox Installer.exe"

☐ Check this box if this app installs silently by default

Signing preference

Select an option

Step 5:
